

Name: _____

Magnet Lab # 2

What materials are attracted to magnets?

What You Need:

- 1 Magnets
- 2 Various items, screws, tacks, staples, thread, erasers, wire, foil, steel wool, toothpicks....

What To Do:

Predict what items are attracted to the magnet and provide reasons for your selection.

Slowly bring the magnet toward each of the objects to determine if there is an attraction or a magnetic pull. Put the items on one side if they cling to the magnet and put the other items on the other side if they do not cling to the magnet.

Record and report your findings.
