

Name: _____

An Ocean Food Chain

The relations between plants and animals make up the many different food chains.

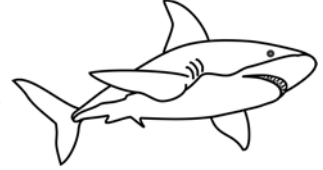

Producers

Herbivores

Carnivore

The algae is food for some small fish, small fish are food for big fish.

Producers:

Plants are producers, they produce their own food and get energy from the sun.

Herbivores: Herbivores only eat plants.

Carnivores: Carnivores only eat meat.

Omnivores: Omnivores eat meat and plants.

Draw and label an aquatic food chain from one of the bodies of water:
