

Our Sun

The sun is a huge star found at the center of our solar system. It is made up of hot gases. It gives off light and heat that we can feel on Earth.

The sun's energy is important for life on Earth. It helps plants grow and provides us with energy. The sun's light also allows us to see during the day and its heat keeps us warm. The sun is so powerful that all of the planets in our solar system, including Earth, orbit around it. The sun is also responsible for the day and night cycle on Earth, as the Earth rotates around it. Without the sun, life on Earth would not be able to survive.

1. Read the passage about our sun.
2. Underline each word that you could not read.
3. Circle each word that took you more than 1 try.
4. Answer the questions.

Answer according to the reading passage:

1. The sun is found:

- a. on earth
- b. beside the stars
- c. in the center of our solar system

2. The sun is a huge:

- a. orbit
- b. star
- c. planet

3. The sun gives off:

- a. gas and fire
- b. hot gasses
- c. light and heat

4. The sun's _____ is important for life on earth:

- a. energy
- b. gasses
- c. orbit

5. The sun is responsible for the:

- a. other stars
- b. orbits around earth
- c. day and night cycle

ANSWERS:

1. The sun is found:

- a. on earth
- b. beside the stars
- c. in the center of our solar system

2. The sun is a huge:

- a. orbit
- b. star
- c. planet

3. The sun gives off:

- a. gas and fire
- b. hot gasses
- c. light and heat

4. The sun's _____ is important for life on earth:

- a. energy
- b. gasses
- c. orbit

5. The sun is responsible for the:

- a. other stars
- b. orbits around earth
- c. day and night cycle
