

# Skeletal System and Levers

If we didn't have a skeletal system, we would be like a cushion unable made of all soft tissue and we wouldn't be able to do anything. Our bones work well with our muscles to help us move. The bones in our bodies almost act like levers. Think of the movement of a crowbar, wheel barrel, see saws to help you remember the actions of levers.

Now, think of the many movements your bodies do with the help of your bones/muscles that are similar to lever action.

## Your Task:

1. Look at the skeleton, use arrows to point to a bone that will act like a lever and describe the movement:
2. Research what organs are protected by your bones and identify their location.
