# Subtraction of Fractions

Find Common Denominators and then the difference.

1.  $\frac{2}{6} - \frac{1}{4} =$

2.  $\frac{5}{6} - \frac{6}{8} =$

3.  $\frac{4}{5} - \frac{3}{5} =$

4.  $\frac{4}{5} - \frac{2}{5} =$

5.  $\frac{5}{6} - \frac{3}{8} =$

6.  $\frac{5}{8} - \frac{1}{8} =$

7.  $\frac{5}{6} - \frac{3}{6} =$

8.  $\frac{2}{3} - \frac{2}{4} =$

9.  $\frac{6}{8} - \frac{2}{8} =$

10.  $\frac{1}{3} - \frac{1}{6} =$

# Subtraction of Fractions

Find Common Denominators and then the difference.

$$1. \quad \frac{2}{6} - \frac{1}{4} = \frac{1}{12}$$

$$2. \quad \frac{5}{6} - \frac{6}{8} = \frac{1}{12}$$

$$3. \quad \frac{4}{5} - \frac{3}{5} = \frac{1}{5}$$

$$4. \quad \frac{4}{5} - \frac{2}{5} = \frac{2}{5}$$

$$5. \quad \frac{5}{6} - \frac{3}{8} = \frac{11}{24}$$

$$6. \quad \frac{5}{8} - \frac{1}{8} = \frac{1}{2}$$

$$7. \quad \frac{5}{6} - \frac{3}{6} = \frac{1}{3}$$

$$8. \quad \frac{2}{3} - \frac{2}{4} = \frac{1}{6}$$

$$9. \quad \frac{6}{8} - \frac{2}{8} = \frac{1}{2}$$

$$10. \quad \frac{1}{3} - \frac{1}{6} = \frac{1}{6}$$
